STYRO Moulding System

STYRO EPS is a popular choice for concrete casting due to its versatility, cost-effectiveness and ease of use. It is a lightweight material that is commonly used as a mould for casting concrete. STYRO EPS can be easily shaped and cut to any desired shape or size, making it an ideal material for creating intricate and complex moulds. It can be coated with a release agent to prevent the concrete from sticking to the mould. Later, the concrete is poured into the mould, allowed to set and the mould is removed to reveal the finished concrete product.

The STYRO Moulding System has gained popularity for its customization and flexibility, which make it ideal for creating moulds for domes, parapets, columns and bridges.
